Long Term Strategy

2020 —————————————————— 2025

Diversity Is Strength
Preamble

EATG’s Long Term Strategy (LTS) 2020-2025 is intended to guide all our activities, internally and externally, over the Strategy’s six years. It sets out our high-level aspirations which subsequently drive more detailed work plans as well as monitoring and evaluation frameworks, including decisions about when EATG may be best suited to lead or with whom we may need to partner in order to achieve our strategic priorities.

EATG is led by people living with or affected by HIV and associated infections (mainly hepatitis B and C, TB and STIs) and morbidities. We are a diverse group of people from across the WHO European region. We value our diversity in nationalities or countries of residence, languages, sexes, genders, ages, beliefs, and ethnicities.

We emphasise a patient/person-centred approach to addressing the HIV-related needs of all key and vulnerable populations. We are committed to promoting 21st century medical and social science to make transformative change for best access for best lives. And we participate at the European level in achieving the UN’s Sustainable Development Goals, including universal health coverage (UHC), as well as ending AIDS, viral hepatitis, and TB as public health threats by 2030. We are committed to promoting the GIPA (Greater Involvement of People living with HIV/AIDS) principle throughout our work.

This LTS emerges from EATG’s revised Mission:

Equitable, speedy and sustainable access to

• effective treatments and holistic care for all people living with HIV and associated infections and morbidities, and
• effective prevention and diagnosis for all communities affected by HIV and associated infections and morbidities.
Programme Areas

Over the 6 years of this LTS, EATG will focus on three programme areas:

1. Quality of Life

To engage, inform and empower all people living with and affected by HIV in improving their health-related quality of life and holistic well-being throughout their life cycle

This programme prioritises working towards integrated sexual and mental health services, challenging stigma and prejudice and other barriers to services, collaborating with and supporting EATG members and partners in Central and Eastern Europe and Central Asia, and promoting sustainability.

2. Combination Prevention

To engage, inform and empower all people living with and affected by HIV in increasing the usage of HIV, viral hepatitis, TB, and STI combination prevention and testing strategies in affected communities

This programme prioritises promoting a full range of testing/diagnostic options, biomedical prevention, and harm reduction in the context of welcoming, non-stigmatising, and effective community-based or community-influenced services.

3. Partners in Science

To engage, inform and empower all people living with and affected by HIV in ensuring that ongoing research continues to yield best quality new HIV, viral hepatitis, TB and STI diagnostics, medicines, medical devices and care, as well as progress towards cure

This programme will focus on long-acting compounds and implants, cure, new treatments, digitalisation, and standards and ethics.
Outcomes 2025

By 2025 we aim to achieve the high-level outcomes of these programme areas which are:

1. Healthy communities of people living with and affected by HIV, with enhanced quality of life and access to effective, integrated health and support systems.

2. Empowered affected communities working in collaboration, with access to the HIV, viral hepatitis, TB and STI prevention tools they need

3. Communities of people living with and affected by HIV engaged with all prospective and observational research processes in up-to-date diagnostics, medicines, medical devices and care relative to HIV, viral hepatitis, TB and STIs

EATG believes we can help to achieve these outcomes because we are patient/person-centred. We prioritise working with people living with HIV. We also prioritise working with marginalised people to help ensure they have access to the services they need, regardless of who they are or where they are located across the WHO European region. EATG pays attention to people who are particularly vulnerable to HIV and associated infections and morbidities as well as lacking in adequate services, including people who use drugs, MSM, sex workers, people on the move (especially refugees, asylum seekers, undocumented migrants and the homeless), transgender and non-binary people, people in prison and other closed settings, people who are under 25 or over 50 years of age and any others who are their sexual partners. We also prioritise work with our partners in Central Europe, Eastern Europe and Central Asia to promote sustainable access to the best services, with the highest standards of care.

Ultimately, we believe that employing the GIPA Principle and the standard of “nothing about us without us” best promotes our health-related quality of life and holistic well-being, best ensures health promotion and prevention services that reach our communities, and best supports scientific research and guideline development that is responsive to real patient and community needs.
Core Programmes

**Quality of life**

Combination prevention

Partners in Science

Strategic Approaches

**Capacity building**

Strengthening the knowledge and capacity of communities, and disseminating robust data and good practices.

**Movement building**

Building strategic alliances, promoting networking, and developing effective internet and social media presence.

**Advocacy**

Becoming more vocal and articulate, and actively engaging in key policy and implementation debates.

**Research**

Engaging with all phases of clinical research and guideline development, and with social science research including on ageing with HIV and best practice in reaching communities.
Healthy communities of people living with and affected by HIV, with enhanced quality of life and access to effective, integrated health and support systems.

Empowered affected communities working in collaboration, with access to the HIV, viral hepatitis, TB, and STI prevention tools they need.

Communities of people living with and affected by HIV engaged with all prospective and observational research processes in up-to-date diagnostics, medicines, medical devices, and care relative to HIV, viral hepatitis, TB, and STIs.

End AIDS by 2030
Quality of Life

Purpose
To engage, inform and empower all people living with and affected by HIV in improving their health-related quality of life and holistic well-being throughout their life cycle, regardless of gender, age or context.

Expected 2025 high-level outcome:
Healthy communities of people living with and affected by HIV, with enhanced quality of life and access to effective, integrated health and support systems.
Scope

Engaging informed and empowered people living with and affected by HIV from across WHO European region in:

**INTEGRATION OF SERVICES, e.g.,**
- promoting integrated prevention, diagnosis, treatment and care approaches to the sexual health, mental health and quality of life of all people living with HIV throughout their life cycle, especially those at risk of limited service access, e.g. sex workers and substance users
- promoting the integration of services that specifically address HIV, hepatitis B and C, TB and STIs
- designing/developing and evaluating new and integrated services and models of care

**CHALLENGING STIGMA AND DISCRIMINATION, e.g.,**
- promoting community-based or community-influenced HIV-related services that are safe and secure for all people living with or affected by HIV, where people can learn and exchange information, meet allies and develop resilience
- tackling stigma and discriminatory attitudes in our communities and among service providers
- advocating for improvements in laws, regulations, policies and practices that undermine the full exercise of the human rights and/or criminalise the lives and behaviours of all people living with and affected by HIV, including freedom of thought and expression, freedom to decide whether and when to be diagnosed or to begin treatment, sexual and reproductive health and rights, with a full and satisfying sexual and emotional life, freedom to make informed decisions about becoming pregnant and initiating breastfeeding, workplace rights and confidentiality of medical records
- participating in implementation research to improve service delivery and approaches to challenging legal and regulatory barriers to HIV, viral hepatitis, TB and STI services, especially in Central Europe, Eastern Europe and Central Asia

**COLLABORATING WITH EATG MEMBERS AND PARTNER NGOs IN CENTRAL EUROPE, EASTERN EUROPE AND CENTRAL ASIA, e.g.,**
- building evidence, monitoring and reporting on rights violations in specific countries or sub-regions
- supporting increased access to highest quality HIV, viral hepatitis, TB and STI prevention, diagnostics, treatment and care
- advocating for sustainable funding of services and any needed technical support in those countries where international donor funding is scheduled to end
- spreading the message of U=U

**PROMOTING SUSTAINABILITY, e.g.,**
- ensuring the diversity of people living with and affected by HIV is represented in key policy forums, including on drug policy, affordability/price reduction of diagnostics and medicines, and UHC
- monitoring access to optimal treatment and diagnostic options and their sustainability, raising awareness to barriers, and making recommendations to responsible stakeholders
- challenging undue use of intellectual property provisions to limit price competition and access to cheaper medicines
Combination Prevention

Purpose

To engage, inform and empower all people living with and affected by HIV in increasing the usage of HIV, viral hepatitis, TB and STI combination prevention and diagnostic strategies in affected communities

Expected 2025 high-level outcome

Empowered affected communities working in collaboration, with access to the HIV, viral hepatitis, TB and STI prevention tools they need
Scope
Engaging informed and empowered people living with and affected by HIV from across WHO European region in promoting and participating in delivering:

A FULL RANGE OF TESTING/DIAGNOSTIC OPTIONS, e.g.,
- integrated community-based and/or community-influenced HIV, hepatitis B & C, TB (including multidrug-resistant and latent TB) and STI testing and treatment
- HIV self-testing
- indicator condition (provider initiated) testing

BIOMEDICAL PREVENTION OPTIONS, e.g.,
- TASP/secondary prevention: getting newly diagnosed people into HIV care, on treatment and achieving and maintaining undetectable viral loads
- hepatitis B and HPV vaccination
- PEP
- PrEP
- topical prevention/microbicides

HARM REDUCTION, especially in Eastern Europe and Central Asia, e.g.,
- OST and clean needles/syringes

OTHER PREVENTION INTERVENTIONS, e.g.,
- prevention of vertical transmission
- accessible services for all people exposed to sexual violence, regardless of sex and gender
Purpose

To engage, inform and empower all people living with and affected by HIV in ensuring that ongoing research continues to yield best quality new HIV, viral hepatitis, TB and STI diagnostics, medicines, medical devices, and care, as well as progress towards cure

Expected 2025 high-level outcome

Communities of people living with and affected by HIV engaged with all prospective and observational research processes in up-to-date diagnostics, medicines, medical devices and care relative to HIV, viral hepatitis, TB and STIs
Scope

Engaging informed and empowered people living with HIV and affected populations from across WHO European region in clinical and social science research, guideline development, and science and regulatory policy debates relative to:

**LONG-ACTING COMPOUNDS AND IMPLANTS, e.g.**,  
- ART and PrEP delivered beyond strict daily regimens  
- slow release implants

**CURE, e.g.,**  
- HIV and hep B cure  
- broadly neutralising antibodies (BNABs)  
- eradication strategies  
- immunotherapeutic strategies to control the viremia

**NEW TREATMENTS, e.g.,**  
- alternative and additional incentives for medicine development and innovative R&D  
- for drug-resistant TB, including multidrug-resistant TB (MDR-TB) and extensively drug-resistant TB (XDR-TB)  
- for paediatric HIV  
- new antibiotic development for bacterial STIs and new substances for viral STIs

**DIGITALISATION, e.g.,**  
- data protection,  
- e-health  
- associated ethical standards

**STANDARDS AND ETHICS, e.g.,**  
- patient-reported outcomes measures (PROM) and patient-reported experience measures (PREM)  
- improving the ethics, efficiency and effectiveness of interventions that increase testing uptake and the rollout of PrEP, and optimise care for all people living with HIV, viral hepatitis, TB and STIs  
- ensuring diversity of participants in research on HIV, viral hepatitis, TB and STIs  
- health technology assessment to inform decision-making about priorities in HIV treatment and care
Strategic approaches to achieve our goals
These approaches are transversal: they will be used in all three programme areas.

Capacity building
- strengthening the knowledge and capacity of all people living with and affected by HIV to understand key scientific and policy developments that affect them, effectively communicate about their implications, and collaboratively advocate for improvements in research and policy
- sharing robust data and good practices to support the implementation of interventions at national and local levels

Movement building
- building strategic alliances and collaborative campaigns with NGOs, EU decision makers, UN agencies, funders and other key stakeholders active in the fields of HIV, viral hepatitis, TB and STIs across WHO European region
- using EATG as a platform for exchange and networking to improve the quality and impact of community activism and interventions at local, national and international levels
- developing effective internet and social media presence to maximise our online activism

Advocacy
- becoming more vocal and articulate in challenging laws, policies, practices and misperceptions about the diversity of people living with and affected by HIV, including raising awareness on how prejudice, stereotypes, stigma, discrimination and criminalisation undermine the exercise of our human rights and attainment of well-being
- actively engaging in key policy and implementation debates to maximise access, uptake and sustainability of the highest quality diagnostics, medicines and other services for HIV, viral hepatitis, TB and STIs

Research
- meaningfully engaging the diversity of people living with and affected by HIV in clinical research priority setting, guideline development, design, implementation, and evaluation relative to the prevention, diagnosis, care and treatment of HIV, viral hepatitis, TB and STIs
- meaningfully engaging the diversity of people living with and affected by HIV in social science research, including on living and ageing with HIV and best practice in reaching affected communities
